DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: 77. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 11 is rejected under 35 U.S.C. 102(b) as being anticipated by McIlroy (3,908,208).

McIlroy discloses a fitting and pipe section assembly (8,13) wherein a first end fitting (13) on a first end (12) of a pipe section (8) is formed, and a second end fitting

Art Unit: 3726

(13) on a second end (14) of the pipe section (8) is formed. A first indicia (13a) is formed between the first end fitting (13) and the second end fitting (13) to guide cutting (i.e. the frangible section of the pipe can be broken, severed, or cut) of the pipe section, and a second indicia (13a) is formed between the first end fitting and the second end fitting to guide the cutting of the pipe section.

Note that "to permit mounting of a close fit heater device in fluid communication with a segment of tubing of a jetted bath" has not been given patentable weight because the recitation occurs in the preamble. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).

Allowable Subject Matter

4. Claims 1-10 and 18-24 are allowed.
5. Claims 12-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
6. The following is a statement of reasons for the indication of allowable subject matter: Regarding claim 1, the prior art does not teach or suggest removing the center

Art Unit: 3726

segment from the fitting and pipe section assembly and defining a gap between a first end fitting and a second end fitting of the fitting and pipe section assembly, securing the close fit heater device in fluid communication with the first and second end fittings with a fastening assembly, in combination with the other claimed limitations; Regarding claim 18, the prior art does not teach or suggest coupling the first and second end fittings in fluid communication with a segment of tubing of a jetted bath, then forming a first cutting guide between the first end fitting and the second end fitting to guide the post installation cutting and removal of a center segment of the pipe section, and forming a second cutting guide between the first end fitting and the second end fitting to guide the post installation cutting and removal of the center segment, in combination with the other claimed limitations.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references cited on the attached PTO-892 are cited to show pipe assembly and construction.
